WOOD FLOORING BASIC MAINTENANCE AND AFTERCARE

An Ultra-Interior Hardwood Floor can be easily maintained. When properly cared for your floor will look its finest for longer. Wood is a natural product and will continue to change in tone, colour, and depth as it matures with age and wear. The following notes give an overview on care for your wood floor.

- Full maintenance information specific to each type of finish are supplied with your order. You can also order the particular cleaning fluids and kits for your floor finish from Ultra-Interior. Do not use other detergents or household cleaners.
- If the wood floor has had a finish applied on site after installation, do not cover over with protective sheets until the finish is fully cured in accordance with the finish manufactures instruction.
- Care should be taken when the floor is first used in the days after a finish is applied, particularly in relation to positioning and moving around heavy furniture items.
- Use protective felt or rubber pads under chair, table, and furniture legs.
- Place large mats at external entrances to help absorb grit, dirt, and moisture from outside.
- Do not allow standing moisture, clean up spillages straight away with an absorbent cloth.
- Use minimum amounts of water when cleaning. Use a well rung out floor mop, and wipe away any remaining surface moisture with clean cloth.
- Direct sunlight can cause areas of the floor to dry out excessively. It may also discolour the floor. Where ever practical, use curtains and blinds to help protect the floor from the sun's intense UV rays.
- If you require further information on care and maintenance of your hardwood floor contact Ultra-Interior.
